

# **ELECTRICAL TEAM TRAINING**

## **TASK 7**

### Task 7.1: Justice League GitHub Repository

#### About

Throughout your rigorous training, you have accomplished numerous tasks alongside the legendary members of the Justice League. Now, you have been entrusted with this mission: to upload all your completed tasks to the Justice League's central repository. This will ensure that your hard work and dedication are preserved and accessible for future reference and coordination.

### Requirements

- Create a GitHub repo and put your previous tasks in different branches each branch with the name of the task
- Create a README file in the main branch and write a description of your repo and different tasks inside

## Task 7.2: Hackers!

### About

Batman has identified a critical need to enhance the security of the Justice League's intelligence network against the hackers from the villains' side. To address this, the mission is to set up and secure a new operating environment. Your objective is to install Ubuntu on a virtual machine and familiarize yourself with key Linux commands to strengthen our digital defenses.

### Requirements

Download Ubuntu and install it on a virtual machine or as a dual boot on your system. Practice basic Linux commands such as `ls`, `cd`, `pwd`, `mkdir`, `rm`, `cp`, `mv`, `cat`, `nano` etc..

Document your practice for each command or tool in any format you prefer, and save this documentation in a Markdown file.

Create a `task7` branch in your repository and upload the Markdown file to this branch.

### Submission

- You will submit your **public github repository link**
- The Task's deadline is 10/8 11:59 PM.
- Q&A Sheet (if you have any question regarding the sessions or the task) : [Q&A Sheet](#)
- Submission form: <https://forms.gle/UBqxSXLQ3FmtJXi6>
- **Cheating is severely penalized**
